#### PREFACE

This issue of the "Population and Vital Statistics" part of the "Statistical Register of New South Wales" contains detailed population and vital statistics tables for 1970. Wherever practicable, statistics for the year 1971 have been included in the timeseries tables to indicate more recent trends.

In the detailed "Causes of Death" tables in "Section II. Vital Statistics", each relevant category in the Eighth Revision (1965) of the International Statistical Classification of Causes of Death have been listed separately, irrespective of whether a death in the period concerned was attributable to that category.

The statistics given in this publication should be read in conjunction with the "Official Year Book of New South Wales." For the most recent statistics, the reader should refer to other publications of the Bureau, particularly the "Statistical Bulletin" and the "Monthly Summary of Business Statistics".

My thanks are tendered to the responsible officers of the various State and Commonwealth Departments and to others who have supplied information, often at considerable trouble.

R.G. WALKER

Deputy Commonwealth Statistician

and

Government Statistician of New South Wales

BUREAU OF CENSUS AND STATISTICS Sydney

## 1. Statistical Areas of New South Wales

- (a) For the purpose of presenting the principal series of official statistics of the State, New South Wales is divided into a number of geographical areas. A new set of these statistical areas was adopted from 1 January 1970. These new areas are used for presenting the statistics in this publication, except in Table 6 which shows the population of Urban Sydney (see Note 2) at each Census.
- (b) Under the new system, the primary division of the State is into 12 Statistical Divisions (including the Sydney Statistical Division, as delineated in 1966). These Divisions (except the Sydney, Outer Sydney, and Far West Statistical Divisions) are subdivided into two or three parts, to provide a second tier of statistical areas comprising (i) the Newcastle and Wollongong Statistical Districts (as delineated in 1966) and (ii) 21 Statistical Subdivisions.
- (c) The Statistical Divisions are intended to represent "regions" of the State which are characterised by discernible social and/or economic links between the inhabitants and economic units within them, under the unifying influence of one or more major cities or towns. The boundaries of the Divisions have accordingly been delineated on the basic criterion that the degree of economic and/or social contact and interaction within each Division should be maximised. It should be emphasised that the boundaries of the Divisions cannot be regarded as sharp lines of demarcation they may, of necessity, be positioned within peripheral zones in which the influences of two or more "focal" cities or towns overlap in varying degrees.
- (d) In the case of Sydney and its periphery, the factors taken into account in drawing the divisional boundaries are necessarily different from those for the rest of the State. The Sydney Statistical Division is predominantly urban in character and its boundary was specially delineated in 1966 to embrace the area expected to contain the urban development of Sydney (and associated smaller urban centres) during at least the next twenty years. The area within the Division is now (or is expected to be) socially and economically oriented, to a marked degree, towards Sydney. The "Outer Sydney" Statistical Division embraces areas which are on the periphery of the Sydney Division, but which have only limited economic and social orientation towards Sydney; such peripheral areas have many independent characteristics and do not logically form part of any other Statistical Division.
- (e) The Statistical Districts (mentioned above) are general-purpose statistical areas. They are predominantly urban in character, and have been delineated using the same concepts as for the Sydney Statistical Division.
- (f) Statistical Subdivisions are component areas within Statistical Divisions, delineated broadly on the basis of topographical and/or climatic features and reflecting, inter alia, some degree of homogeneity of agricultural activity.
- (g) These statistical areas, and their constituent local government areas, are listed in Table 10 of "Section 1. Population", pages 13-17.

### 2. Urban Sydney.

- (a) Until 30 June 1966, Urban Sydney (then termed the Metropolis of Sydney or Sydney Metropolitan Area) as defined for general statistical purposes, comprised the City of Sydney, those contiguous local government areas which were mainly urban in character, and the urban parts of those contiguous peripheral local government areas which had a large rural component. The boundaries had been extended in 1911, 1929, 1933 and 1954 (as described in the 1965 issue of "Population and Vital Statistics") to embrace significant peripheral urban development.
- (b) For the Censuses of Population and Housing of 30 June 1966 and 1971, the boundaries of Urban Sydney were defined for statistical purposes in accordance with new criteria. The boundary was delimited at each census by:-
  - (i) identifying census collectors' districts (the smallest geographical areas for which population figures are available) as "urban" if either (a) the density of population in the district was at least 500 persons per square mile at the census date, or (b) the district satisfied special criteria and rules applied to districts containing areas which had special functions (e.g. airports, sporting areas and industrial areas) and did not meet the basic population density criterion; and
  - (ii) aggregating all contiguous "urban" collectors' districts (with some special rules covering the inclusion of non-contiguous districts).

The boundary of Urban Sydney will be adjusted at future censuses in accordance with these criteria - as urbanisation proceeds, the boundaries will move outwards to embrace peripheral urban development.

## 3. Aborigines

- (a) Full-blood Aborigines have been included in population statistics relating to 30 June 1966 and all later periods. Births and deaths of full-blood Aborigines were included in the vital statistics of the State for all periods to 31 December 1932, and from 1 January 1966, marriages of Aborigines are included in all periods.
- (b) Differences between population estimates including Aborigines and those purporting to exclude them should not be taken as a reliable measure of the number of full-blood Aborigines.

## 4. Population and Migration Statistics

(a) Population of New South Wales

The periodic census enumerations of population and housing are the most accurate source of information about the population of New South Wales.

For periods between censuses, the population of the State is estimated by adding the subsequent natural increase (the excess of births over deaths) and estimated net migration to the population ascertained at the previous census. Accurate data as to natural increase are ensured by the compulsory registration of births and deaths. A comprehensive system of recording overseas arrivals and departures is maintained, but complete records of interstate movements are not available and figures of net migration are therefore approximate. Intercensal population estimates are subject to revision when the population is ascertained at the next census, and any discrepancy disclosed by the census is added to the estimated net migration.

Since 1961, the estimated net migration component has been based on (i) statistics of overseas migration by State of residence and (ii) estimates of interstate transfers of residence (with no allowance for holiday, business, or other similar short-term movements interstate). In population estimates shown for earlier years, the net migration component is based on statistics of overseas migration by State of embarkation or disembarkation and approximate measures of all interstate movements.

Population estimates for periods between 1966 and 1971 have been revised in the light of preliminary results of the 1971 Census of Population and Housing and are subject to amendment when final 1971 Census results are prepared. Statistics of population and migration have been rounded to the nearest hundred.

(b) Migratory Population

Shipping population and other migratory population are not included in any subdivisions of the  $\operatorname{State}$ .

- (c) Overseas Arrivals and Departures
  - i. The figures of overseas arrivals and departures represent ship and aircraft passengers disembarking from overseas (arrivals) or embarking for overseas (departures) at New South Wales ports. They include overseas passengers travelling via New South Wales to or from other States, and exclude those travelling via other States to or from New South Wales. The figures should not be taken to represent the true overseas migration to or from New South Wales.
  - ii. Overseas arrivals and departures are classified according to the length of their stay, as stated by travellers upon arrival in or departure from Australia. In the classification:

"Permanent Movement" covers persons arriving to settle permanently in Australia and Australian residents leaving to settle permanently abroad.

"Long-term Movement" comprises - in the case of arrivals: Australian residents returning after one year or more in an overseas country and visitors intending to stay in Australia for at least a year; and in the case of departures: Australian residents leaving to stay in an overseas country for at least a year and visitors leaving after a stay of one year or more.

"Short-term Movement" covers all other arrivals and departures including the movement of Australian troops (irrespective of period of stay overseas), United States troops visiting Australia on rest and recreation leave and the departure of persons who stated on departure that they had come to Australia intending to settle but had stayed for less than a year.

Statistics of characteristics of travellers in the short-term movement from April 1971 are estimates derived from a fifty per cent. sample of short-term travellers. While the total number of such travellers and statistics of their mode of transport are fully known, statistics in various classifications, e.g. nationality, may differ from those that would be obtained from complete processing. Statistics of permanent and long-term movement are based on records of all travellers in this movement and therefore do not contain sampling errors. However, since short-term movement is a component of total movement, statistics of characteristics of travellers in total movement are subject to such errors.

## 4. Population and Migration Statistics (continued)

- (c) Overseas Arrivals and Departures (continued)
  - ii. (continued)

The intended length of stay (as stated by Australian residents departing and non-residents arriving) represents the traveller's intention at the time. Many travellers subsequently change their intentions, and this must be borne in mind in interpreting the statistics.

iii. Passengers passing through Australia on board the same ship or on the same flight, passengers on short pleasure sea cruises in the South-West Pacific commencing and finishing in Australia on ships not then engaged in regular voyages, and all members of the crews of ships and aircraft, are excluded from the figures of overseas arrivals and departures.

#### 5. Vital Statistics

- (a) Statistics of births, deaths, and marriages in New South Wales relate to all such events which occur in the State. The statistics are compiled on the basis of the year of registration of the event; details of the month and year of occurrence are shown in Table 21 (live births) and Tables 35 and 51 (deaths).
- (b) The births registered in New South Wales are allocated to a local government area according to the usual residence of the mother, and the deaths registered are allocated according to the usual residence of the deceased; in cases where the usual residence is outside the State, the birth or death is allocated to the local government area in which it occurred. As the information reported is in many cases insufficient to establish the usual residence with complete accuracy, the figures for individual local government areas should be regarded as approximate. For local government areas contiguous to the State's borders, the figures may be affected to some extent by interstate movements for hospitalization (see note (c) Table 7, page 33).
- (c) The marriage, birth, and death rates per 1,000 of mean population shown in this issue for 1966 and later years have been calculated on the basis of population estimates revised in the light of preliminary results of the 1971 census.

#### 6. Still-births

Still-births are not included in statistics of deaths. Compulsory registration of still-births became effective in 1935, and until 1967 a still-born child was defined as "any child of seven months gestation or over, not born alive, and includes any child not born alive which measures at least fourteen inches, but does not include any child which has actually breathed". For the year 1968, this definition was amended for statistical purposes to exclude any child whose heart beat after delivery. Statistics of still-births from 1 January 1969 relate to births of foetuses, registered in New South Wales during the year, which were of at least 20 weeks gestation, or at least 400 grammes weight at delivery, and whose heart did not beat after the complete expulsion or extraction of the child from the mother. Statistics of still-births for 1969 and subsequent years are therefore not comparable with statistics for earlier years owing to the changes in definition; the number of neonatal deaths registered may also have been affected to some extent by these changes.

## 7. Classification of Causes of Death

From 1 January 1968 deaths have been classified according to the Eighth Revision (1965) of the International Statistical Classification of Diseases, Injuries, and Causes of Death, and figures for the various classes and categories of causes of death are not strictly comparable in all cases with those for years prior to 1968. The international rules for selecting the underlying cause of death have been used in coding, and the full 3-digit classification (with some 4-digit categories) has been used in tabulation. Accidents, poisonings and violence (Class XVII) have been classified according to the external cause of injury.

- 8. Statistical Summary (pages 148 to 151)
  - (a) For the sake of uniformity, population estimates prepared by the Commonwealth Statistician have been adopted for all years. On this account, estimates of population shown for years prior to 1921 differ slightly from the estimates published in the 1949-50 and earlier issues of Population and Vital Statistics. All estimates have been adjusted in accordance with the results of the various censuses. Birth, death, and marriage rates shown on page 151 have been based on these population estimates.
  - (b) The figures of natural increase shown for 1932 and earlier years in Table 2 were compiled by the Government Statistician of New South Wales, and are the same as in previous issues of Population and Vital Statistics. They include births and deaths of full-blood Aborigines, and consequently differ from the figures published by the Commonwealth Statistician.
  - (c) In Table 2, the difference between (i) the sum of the natural increase and the net migration, and (ii) the total increase in population, represents:-
    - (i) for the period 1907 to 1932, the difference between the natural increase as shown and the natural increase as compiled by the Commonwealth Statistician and used in the population estimates; and
    - (ii) for the period from September 1939 to June 1947, the deaths of defence personnel.

  See Explanatory Note 3, page 6.
  (h) Preliminary census results.
  Note. The figures quoted for 1841 and subsequent years represent the population of New South Wales within its boundaries after the separation of Victoria and Queensland. Victoria was separated from New South Wales on 1 July 1851, and Queensland on 10 December 1859.

NO. 2. ESTIMATED POPULATION (a), N.S.W., 1960 TO 1971 (Adjusted in accordance with the preliminary results of the census of 30 June 1971)

			At 31 December			At 30 June			
Year	Males	Females	Persons	Increase During Year

(a) Excess of live births over deaths.
(b) Excess of overseas and interstate arrivals over departures. The sign (-) denotes an excess of departures over arrivals.
(c) Full-blood Aborigines are excluded in population estimates before 30 June 1966, and in statistics of births and deaths (and hence, of natural increase) before 1 January 1966. See Explanatory Note 3, page 6.

<sup>(</sup>a) On the basis of boundaries as delimited at 30 June 1971. The figures of total increase (and consequently net migration) are based on preliminary results of the 1971 Census.
(b) Excess of live births over deaths.
(c) Represents the difference between the natural increase and the total increase in population.
(d) The sign (-) denotes a decrease.
(e) Increase per 1,000 of mean population during the period.
(f) Annual average rate per cent. increase.

NO. 10. POPULATION OF MUNICIPALITIES AND SHIRES IN STATISTICAL DIVISIONS, 1966 TO 1971

Note. The figures for each local government area are on a comparable basis for all the years shown, and relate to its area as delimited at 30 June 1971. A letter "o" attached to a figure for a particular year indicates that that figure and those for preceding years have been adjusted because of a change in the boundaries of the local government area. In the case of local government areas affected by boundary changes, figures shown for the census year 1966 may involve a measure of estimation.

(a) Figures of births and deaths for areas centiguous to the State's borders may be affected significantly by the registration in N.S.W. of births and deaths of residents of other States, and vice versa (see Explanatory Note 5(b), page 7).

Adjusted totals based on usual residence, irrespective of State of registration, are shown below for the areas mainly affected:-

North Coast Division

Northern Division

Murray Division

South Eastern Division :

: 3,999 births, 2,275 deaths (Tweed S. 398b., 209d.).
: 3,517 births, 1,444 deaths (Ashford S. 53b, 18d.; Boolooreo S. 84b., 2,d.; Boomi S. 60b., 14d.; Tenterfield M. 76b., 33d.; Yallaroi S. 82b., 50d.).
: 2,502 births, 1,110 deaths (Queanbeyan M. 470b., 76d.; Tallaganda S. 43b., 23d.; Yarrowlumla S. 56b., 25d.)
: 1,778 births, 714 deaths (Albury M. 545b., 246d.; Berrigan S. 162b., 62d.; Balranald S. 66b., 16d.; Murray S. 75b., 32d.; Tumbarumba S. 82b., 33d.; Wakool S. 98b., 34d.; Wentworth S. 140b., 45d.).
: 740 births, 357 deaths (Broken Hill M. (City) 605b., 32id.; Central Darling S. 93b., 32d.).

Far West Division

<sup>(</sup>a) Comparisons of causes of death from year to year should be made with caution, a number of factors (such as changes in the mode of certification and classification, improvement in diagnosis etc.) may have influenced the figures. Information obtained from certifiers as the result of more intensive query programmes may also lead to significant changes in the number of deaths assigned to certain disease categories. In 1969 and 1970 a more intensive query programme in relation to neonatal deaths affected significantly the number of deaths assigned to certain disease categories in the class "Certain Causes of Perinatal Morbidity and Mortality."

At 26 January 1788.

Victoria separated from New South Wales on 1 July 1851.

Queensland separated from New South Wales on 10 December 1859.

Australian Capital Territory separated from New South Wales on 1 January 1911.

Jervis Bay area transferred to Australian Capital Territory on 4 September 1915. Population adjusted from 1 January 1916.

Full-blood Aborigines are excluded from population statistics before 1966. See Explanatory Note 3, page 6. Pigures for periods later than 30 June 1966 have been revised in the light of preliminary 1971 census results.

See Explanatory Note 8, page 7.
Excess of live births over deaths.
Excess of overseas and interstate arrivals over departures. The sign (-) denotes an excess of departures over (c)

(c) Excess of overseas and interstate arrivals over departures. The sign (-) denotes an excess of departures over arrivals.
(d) Figures for Net Migration for 1933 and later years have been revised to include adjustments for discrepancies in population estimates disclosed by periodic censuses.
(e) For Natural Increase and Net Migration, the rate is the increase per 1,000 of mean population; for Total Increase, the rate is the percentage increase based on the population at the end of the previous year.
(f) Australian Capital Territory separated from New South Wales on 1 January 1911. Jervis Bay area transferred to Australian Capital Territory on 4 September 1915; population adjusted from 1 January 1916.
(g) Excess of births over civilian deaths from September 1939 to June 1947.
(h) Excludes troop movements from September 1939 to June 1947.
(i) Full-blood Aborigines are excluded from population statistics before 1966. See Explanatory Note 3, page 6. Figures for periods later than 30 June 1966 have been revised in the light of preliminary 1971 census results.

(a) Australian Capital Territory separated from New South Wales on 1 January 1911.
(b) Jervis Bay area transferred to Australian Capital Territory on 4 September 1915. Population adjusted from 1 January 1916.
(c) Full-blood Aborigines are excluded in mean populations for all periods before 30 June 1966. See Explanatory Note 3, page 6. Figures for periods later than 30 June 1966 have been revised in the light of preliminary 1971 Census results.

<sup>(</sup>a) Number per 1,000 of mean population.
(b) Australian Capital Territory separated from New South Wales on 1 January 1911.
(c) Excludes deaths of Defence Forces serving overseas.
(d) Jervis Bay area transferred to Australian Capital Territory on 4 September 1915. Population adjusted from 1 January 1916.
(e) From 1 January 1933 to 31 December 1965, births and deaths of full-blood Aborigines were excluded - see Explanatory Note 3, page 6.
(f) Excludes deaths of defence personnel.
